Projects

Exam Seating Arrangements (PG Project)
- Technologies Used: Java (Servlet), HTML, CSS, JavaScript, MySQL
- Developed a dynamic web application to automate exam seating arrangements, reducing scheduling time by over 70% and ensuring fair seat allocation using intelligent logic.
- Implemented role-based access with Java Servlets for backend processing and MySQL for secure real-time data management, allowing admins to manage seating plans, generate downloadable PDF seating charts, and students to view personalized information.

Location Based Online Shopping (UG Project)
- Team Size: 2, Technologies: Java (JDK), HTML, PHP, MySQL.
- Collaborated with a team to build a geolocation-based e-commerce platform that displays nearby vendors and available products, improving local product discovery and vendor visibility.
- Managed MySQL databases through phpMyAdmin, including schema design, data manipulation, and query optimization for reliable, high-performance data handling.

Mini Projects
- Technologies: HTML, CSS, JavaScript.
- Developed a real-time digital clock using JavaScript's Date object, a utility billing interface for calculating electricity costs, and a word count tool for real-time text analysis, enhancing skills in DOM manipulation, interval timing, conditional logic, and string manipulation.
